FINOS Ambassador, Keynote Speaker
and Open Source Champion

Gideon Aryeetey

Engineering Lead

FINOS and **GitProxy** contributor

Nick Black

Chief Product Officer

Board member at [OpenStreetMap](#) (OS maps used by Apple and Facebook). 1st corp sponsor of [Leaflet](#) (42k GitHub stars)

Orgs Want to Contribute to Open Source Without Bottlenecks or IP / Compliance Risks

1

👐 Open Source Contributions

Financial Services organisations want to contribute to open source projects.

2

🚫 IP / Compliance Risks

Risks of reputational damage and IP Leaks cause compliance hurdles to block or slow OSS programs

3

✖ Bottlenecks / Clunky Workflows

Workarounds and existing solutions solve for compliance, but also introduce complications and require self-hosting.

4

GitProxy solves many of these problems.

Woodchip is an extension that take GitProxy further

GitProxy: secure, policy-compliant access to Git repositories

GitProxy is a FINOS project that enables open source collaboration while maintaining compliance with organizational policies. It acts as an intermediary between developers and remote repositories.

Developer Workflow

Developers use native Git commands without interruptions to their usual workflow.

Policy Enforcement

Traffic routes through the proxy, which applies organization-defined security and compliance rules.

Risk Mitigation

Prevents IP leakage while maintaining full Git functionality across HTTP, HTTPS, and SSH protocols.

Flexible Configuration

Can be configured globally or per repository to meet specific organizational needs.

Current State of OSPO Compliance

Manual Approval Overload

Each commit requires separate clearance

Burden Slows Down Teams

Time-consuming configurations, repeated sign-offs

Solutions Lack Full Control

Risk of IP leakage in attachments, lack of support for GitHub issues and comments

The Cost of Inaction is Real

Customers in financial services tell us how hard it is to strike a balance between **compliance** and **developer experience**, with slip ups leading to:

Reputation & Regulatory Risk

Single slip-up exposes company

Operations & Approval Chaos

Admin intervention creates backlog

Opportunity Cost

Talent wrestling compliance instead of innovating

Woodchip Lets Orgs Contribute to OS Without Bottlenecks or IP / Compliance Risks

Easy to Setup

SaaS based setup requires no developer time

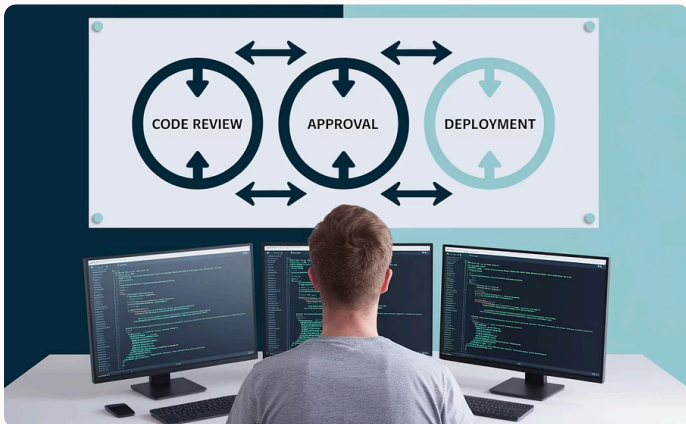

User Interface

Easy for OSPO heads to use and configure (no text based config)

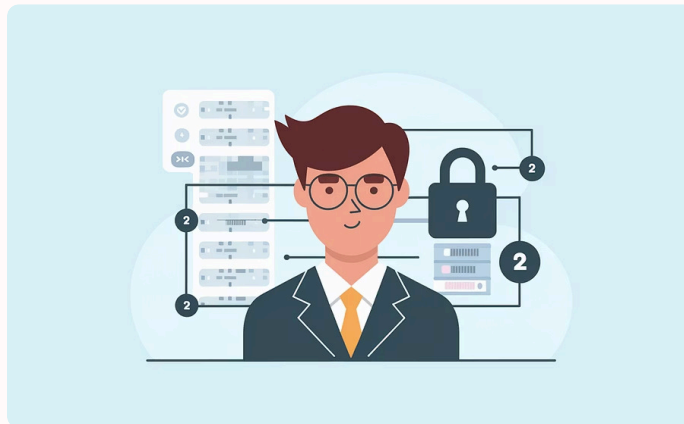

Full Coverage

GitHub comment monitoring (not just monitoring the code base)

No Developer Bottlenecks

Automated review accelerate open source contributions

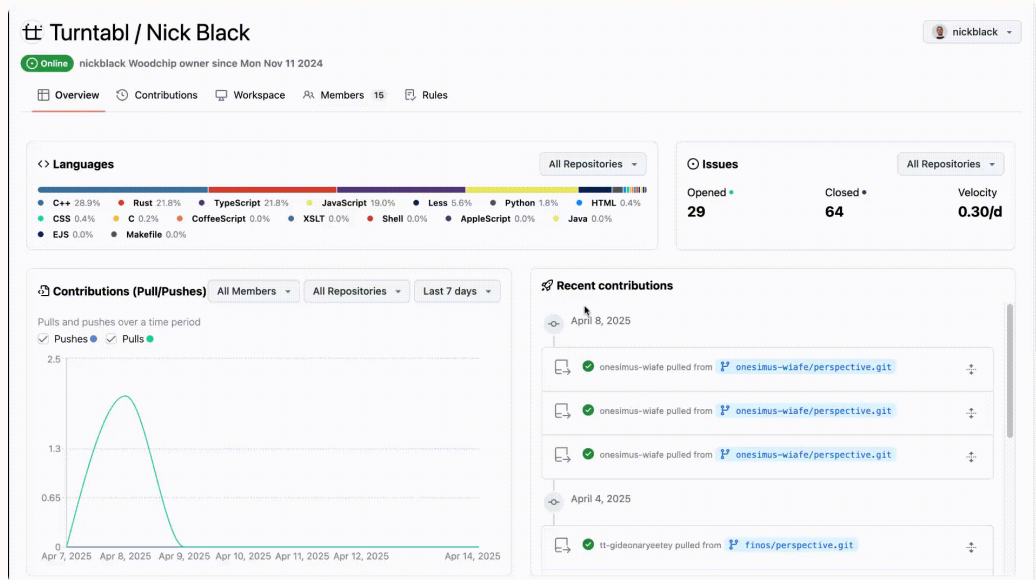

No User Security Gaps

Links users and prevents skipping proxy

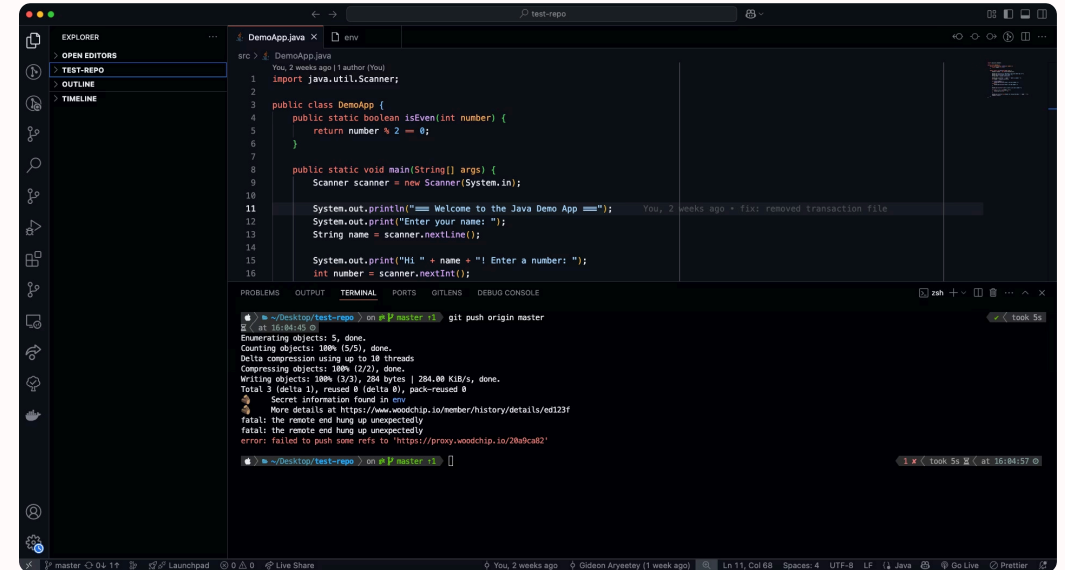

Great Developer Experience *and* Easy to Manage Compliance with Woodchip

OSPO Manager Experience

Complete visibility into all contributions with automated governance checks.

Developer Experience

Seamless workflow integration that doesn't slow down innovation.

Woodchip - Open Source Without The Bottlenecks or IP Risks

Easy SaaS Setup

No IT overhead, instant UI-driven policy creation

Full Audit Trail

Covers commits, comments, issues, pull requests

Automated Compliance

Eliminates manual approvals, flags risky content

Developer-Friendly

Minimal friction, alerts only for violations

Join us on our Journey

We're seeking **early pilot customers** to join our journey.

Get Up and Running in Days

Improve your developer experience without compromising on compliance.

Shape Our Roadmap

We'll build specific capabilities tailored to your organization's unique needs.

Early Adopter Discount

Exclusive pricing available only to our initial partners.
