

A TRUSTED COMMUNITY FOR FINTECH INNOVATION

We are a non-profit foundation with Wall Street roots, setting out to **build a new open source innovation model for fintech**. Our vision is to provide a **trusted arena** where the financial services firms can collaborate as a community to drive **faster innovation** and **interoperability** in the industry.

What We Do

- Projects**
 Our projects are open source and community driven. They currently include components of the Symphony platform, fintech desktop containers and developer tools and will grow to include additional open source fintech ecosystems.
- Working Groups**
 Our working groups are members-only forums for collaboration on inter-organization open standards, policies, and high-level industry integration initiatives like the OSS readiness program.
- Open Developer Platform**
 The Foundation offers an Open Developer Platform (ODP) free-of-charge to all of our open source contributors. The ODP provides developer access to Symphony and other Fintech APIs, as well as a best-of-breed devops toolchain to support ongoing quality, security, and IP compliance for our projects. See: <https://www.symphony.foundation/open-developer-platform>.
- Industry Networking**
 The Foundation hosts and sponsors developer- and executive-focused events for our members and community. If you're interested in co-organizing a developer event, a meetup, or a thought-leadership event, contact us at info@symphony.foundation.

Our Community by the numbers

Open Source Projects
